

VT800D

A Voltage tester is by far one of the most important instruments of an electrician or installer. In the development of the VT800D, all-important arguments of end users and all-important values have contributed to the realisation of the instrument. Therefore the VT800D is an instrument with multiple functions for every electrician, installer or industrial end user.

Automatic ON/OFF

The VT800D can also be switched into resistance mode by pushing the resistance button. In case no function is activated for 15 sec., the VT800D will be switched off.

Display

The VT800D is unique by its full LCD display, indicating by bargraph and the exact values. For locations with less lighting, the LCD display is integrated with a backlight.

Selectable probe tips

For measuring in diverse circumstances and applications, the VT800D are equipped with selectable probe tips that can easily be screwed off. This implies that two sized of tips are available, 2 and 4 mm.

IP65 and dropproof

In order to be able to use the testers in all circumstances and situations, the housing of the VT800D is waterproof with an IP64 value. In case the instrument drops, the housing is drop proof unto 1 meter.

AC/DC Voltage

Automatically by starting the Voltage measurement, the AC or DC Voltage will be indicated by the instrument. The VT800D gives the exact value (6 ... 690).

Phase rotation

The phase rotation is very important at three phase installations or appliances. By using a sophisticated technique, both instruments are able to indicate the phase rotation by using 2 poles.

Continuity

For inspection of cables, resistors, etc. the instruments are integrated with a continuity function. In case of a proper continuity, the LED will light up and a beeper will go off.

Torch

For measuring in situation with poor lighting, the torch can be used for illumination of the probe tips.

Resistance

The VT800D has an integrated function for measuring resistance up to 2000 Ohm. Pushing the resistance button on the front of the instrument can activate this function.

Accessories

As an accessory several bags and a holster are available. This holster is equipped with compartments for storage of screwdrivers, pens or even a phone, beeper or notebook
